

► Safety in the railway sector

Railway industry

Safety is the top priority in the railway industry. If this is to be guaranteed, it is essential to have precise and rapid processes that are monitored and observed closely. We offer the benefit of our experience and the use of proven automation technology of the very highest standards. Pilz is the partner you need for safety in the railway station, on the platform and at the level crossing as well as in the shunting yard and in rail vehicles. You can rely on us for safely and economically designed infrastructure facilities and the expansion and optimisation of rail transport.

Our solution for you

- The automation system PSS 4000-R – enhanced and railway approved specifically for your requirements
- Decentralised, expandable I/O modules deliver the greatest possible flexibility in the automation system – to suit requirements or the project size
- SIL-4-capable control systems compliant with CENELEC standards EN 50121, EN 50126, EN 50128, EN 50129, EN 50155 and EN 45455
- Safe network connection over long distances with SafetyNET p, the real-time Ethernet-based protocol
- Realisation of a wide variety of network architectures
- Interface modules for 24 V and 60 V
- PASvisu for rapid visualisation and troubleshooting

► Safety for sensitive areas in rail technology

You can rely on the proven automation system PSS 4000-R and the visualisation software PASvisu – the perfect symbiosis of control and visualisation!

Automation system PSS 4000-R

PSS 4000-R is your solution for safe control and communication tasks and for linking up infrastructure facilities with autonomous systems. The ability to connect, combine, extend and replicate the various facilities as well as ease of configuration are all key advantages of the system. This reduces the engineering and wiring input needed for your application. Rapid commissioning and maintenance along with user-friendly remote diagnostics and remote maintenance simplify the handling of the automation system PSS 4000-R.

Visualisation software PASvisu

The web-based visualisation software PASvisu allows you to keep a close eye on your vehicles and systems.

It is optimally tailored to the automation system PSS 4000-R. Your benefit: acceleration of your projects from engineering through runtime to maintenance thanks to the ability to identify and localise faults and errors rapidly.

As well as the failsafe I/O modules, standard modules of the -T series can also be used for standard functions.

► Safety and automation in rail vehicles and infrastructure fa

PSS 4000-R – the core component for digital networking regulates complex processes

ilities up to SIL 4

+ Axle counters and switching contacts

Recording and provision of sensor data.

Your benefits at a glance

- ▶ Open, independent automation system instead of proprietary special solutions
- ▶ Standardised solutions for hardware and software in accordance with IEC 61131, plus communication in accordance with IEC 61784
- ▶ Standardised, individually adaptable software blocks possible
- ▶ Fast, simple programming with graphics program editor
- ▶ Reduced input in development process thanks to integrated security mechanisms in the control system
- ▶ Possibility of remote maintenance, diagnostics and visualisation with PASvisu
- ▶ Compliance with the tougher ambient conditions for railway applications such as greater operating temperature range -40 to $+70$ °C, electromagnetic compatibility and mechanical strength
- ▶ Reduced approval work thanks to certified base system in accordance with CENELEC/TÜV
- ▶ Investment and operating costs are reduced
- ▶ Use of standard products for solutions at the highest safety level up to SIL 4
- ▶ Forward-looking, expandable concepts
- ▶ Obsolescence management: rapid, flexible spare parts supply even for many years to come

+ Remote access

Remote access and diagnostics with the web-based visualisation software PASvisu.

Pilz develops environmentally-friendly products using ecological materials and energy-saving technologies. Offices and production facilities are ecologically designed, environmentally-aware and energy-saving. So Pilz offers sustainability, plus the security of using energy-efficient products and environmentally-friendly solutions.
